

**EXTENDED HEEL TAB**

Designed for an easy pull-on

**NEW MESH UPPER**

Partially made from recycled polyester and double jacquard recycled content

**VIBRAM® MEGAGRIP WITH TRACTION LUG**

Designed for an enhanced grip on the ground

**LATE STAGE META-ROCKER**

Provides a propulsive and smooth ride on the trail allowing for movement on uneven terrain

**PROTECTIVE TOE RAND**

Designed for protection from rocks and trail debris

**SPEEDGOAT 5**  
GRIPPY. CUSHIONED. TRAILBLAZER.

A workhorse designed for technical trails, the Speedgoat returns with **less weight** and **more traction** than ever before. A new shoe from outsole to laces, this trail beast is updated with **Vibram® Megagrip with Traction Lug** for enhanced grip on loose soil. Retaining the same stack height and rocker profile, the **Speedgoat 5** employs a lighter midsole compound and heartier, double layer jacquard mesh to inspire confidence on any terrain.

<b>GEOMETRY</b>	W 31mm heel 27mm forefoot
	M 33mm heel 29mm forefoot
<b>WEIGHTS</b>	W 8.5 oz. 242g
	M 10.3 oz. 291g
<b>SIZES</b>	W 5-11, 12[B], WIDE W 05-11, 12[D]
	M 7-13, 14, 15[D], WIDE M 7-13, 14, 15[2E]

Product Measurements are based on a Men's Size 9 and Women's Size 7. Variations will occur based on actual size and production, and should be used for general comparison purposes only.

**WHAT'S CHANGED FROM THE SPEEDGOAT 4**

SPEEDGOAT 5

SPEEDGOAT 4

- A reworked outsole featuring Vibram® Megagrip with Traction Lug is designed to provide more surface contact and traction;
- A lighter midsole compound (plus some other material updates) is designed to provide the familiar confidence-inspiring cushion in a package that's half an ounce lighter;
- A reworked upper is designed to provide more room for your feet to move on the trails.

**HOW IT COMPARES**

**TECTON X**

- Both the Speedgoat 5 and Tecton X feature a protective-yet-responsive midsole design, unique HOKA geometry for a smooth ride, and a Vibram® Megagrip with Traction Lug outsole designed to inspire maximal confidence on the trail;
- The Speedgoat 5 is designed with a single-density foam designed to provide a balance of energetic response and softer support, while the Tecton X utilizes a dual-density PROFLY X midsole design featuring one soft layer, one more responsive layer, and a carbon fiber plate designed to provide maximal efficiency through each stride.

**MAFATE SPEED 3**

- Both the Speedgoat 5 and Mafate Speed 3 feature enhanced cushioning designed for protection and support, as well as Vibram® Megagrip compounds on the outsole, to inspire maximal confidence on challenging trails;
- While the Speedgoat 5 features a single-density foam designed to provide a balance of energetic response and soft cushion, the Mafate Speed 3 features a dual-density midsole design with a softer top layer of foam and a firmer, more responsive layer of rubberized EVA foam underneath, all designed to provide a different form of that soft/responsive experience.

**TORRENT 2**

- Both the Speedgoat 5 and Torrent 2 are designed to provide a relatively high amount of cushion and confidence at a relatively low weight on challenging trails;
- While the Speedgoat is designed with an emphasis on support, cushion, and ultimate traction, the Torrent 2 is designed with a focus on providing a sufficiently grippy and protected ride in a package that is lightweight and nimble enough for shorter, faster races.
